Message-Oriented Middleware (MOM) is a software infrastructure which supports the sending and receiving of messages between component information systems in an enterprise's distributed system. Message-driven processing is required in a client/server environment that uses a special program called a message broker. A client sends a message to the message broker which is designed to handle many messages from multiple clients and forward them to the appropriate server application. The middleware creates a communications layer that insulates developers from the complexity of different operating systems and network protocols.

The global Message Oriented Middleware market size is projected to grow from US\$ 5024.3 million in 2023 to US\$ 9829.9 million in 2030; it is expected to grow at a CAGR of 10.1% from 2024 to 2030.
