Because of the unique advantages of small size, stable biological characteristics, high reproduction rate, and easy artificial breeding, mice are often used as the first choice for biological research and teaching experiments. When conducting experiments, in order to collect various species of mice For this indicator, the mice to be tested are often put into the detection cage, and the physiological state of the mice needs to be closely observed. At this time, it is necessary to use collection equipment to accurately collect the food intake, water intake, and excretion of the mice; the mouse metabolic cage includes metabolites The collection frame and the cage body detachably installed above the metabolite collection frame, the metabolite collection frame includes a funnel-shaped collection part, the inner wall of the collection part is provided with an installation groove, and a separation device for separating urine and feces is installed in the installation groove. The bottom of the collecting part is provided with a urine collection port, and the urine collection port is connected with a collection bottle.
