## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Metal 3D printer, also called metal additive manufacturing, can produce metallic products through three - dimensional and printing technology. Now it is widely used in automotive industry, aerospace industry and medical industry. Metal 3D printer works by laying down metal powder. A high powered laser then melts that powder in certain precise locations based on a CAD file. Once one layer is melted, the printer will place another layer of metal powder on top, and the process repeats until an entire object is fabricated.

The research process involved the study of various factors affecting the industry, including the government policy, market environment, competitive landscape, historical data, present trends in the market, technological innovation, upcoming technologies and the technical progress in related industry, and market risks, opportunities, market barriers and challenges.
