A metal barrel is a rigid packaging container primarily made of carbon steel, stainless steel, aluminum, or other metals through stamping, rolling, welding, seaming, and surface-treatment processes. It is mainly used for the storage and transportation of petroleum products, lubricants, chemicals, coatings, food products, pharmaceutical ingredients, and hazardous materials. This report mainly covers open-head and tight-head metal barrels of different capacities, excluding plastic drums, fiber drums, wooden barrels, metal cans, aerosol cans, and intermediate bulk containers (IBCs).

The upstream segment of the metal barrel industry mainly includes cold-rolled steel sheets, galvanized steel sheets, stainless steel sheets, aluminum materials, sealing rings, lids, closures, and internal and external coatings. Fluctuations in steel prices have a significant impact on production costs and manufacturers' profitability. The midstream segment consists of companies engaged in barrel design, stamping, welding, seaming, coating, testing, recycling, and reconditioning. Downstream demand primarily comes from petrochemicals, lubricants, coatings, resins, specialty chemicals, pesticides, food, pharmaceuticals, and hazardous-goods packaging, where customers generally focus on sealing performance, corrosion resistance, drop resistance, hazardous-goods packaging certification, and reusability.
