Metal has been used in electronic packaging earlier because of its good mechanical strength, good thermal conductivity, electromagnetic shielding function, and easy mechanical processing, and it is still the main material of electronic packaging today. Metal packaging refers to a form of electronic packaging in which metal is used as the main material of the shell, the chip is directly or indirectly mounted on the base through the substrate, and the internal and external circuits are connected by leads. Traditional metal materials include: Cu, Al, Kovar alloy (iron-nickel-cobalt alloy), Invar alloy (nickel-iron alloy), W, Mo alloy, etc.
