Metal Building Framing System is a building frame that uses steel as the main structural material and is widely used in industrial, commercial and agricultural buildings. The system provides strength and stability to support the roof, walls and other loads of the building by using structural components such as steel beams, steel columns, and steel roof trusses. The steel structure frame has the advantages of light weight, high strength, strong earthquake resistance and good durability, so it has become a commonly used structural form in modern buildings. The steel structure frame can be prefabricated and assembled, which greatly shortens the construction period and reduces the complexity and cost of on-site construction. With the development of construction technology, the steel structure frame system has gradually developed in the direction of lightweight, modular and sustainable.

United States market for Metal Building Framing System is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
