The global Metal Card Edge Connectors market size is predicted to grow from US$ 997 million in 2025 to US$ 1475 million in 2031; it is expected to grow at a CAGR of 6.7% from 2025 to 2031.

Metal card edge connectors are a type of board-to-board electronic connectors, in which both the plug and the socket are made of metal materials. When the edge of the printed circuit board (PCB), usually equipped with gold fingers, is inserted into the connector, the metal contacts inside the connector will make reliable electrical connections with the conductive traces on the PCB edge. This enables the transmission of electricity and signals between the PCB and other connected systems. They have the advantages of high electrical conductivity, excellent mechanical strength, good durability and reliability, and are suitable for applications requiring high current and high voltage, such as computer motherboards, servers, industrial control equipment and communication devices.

United States market for Metal Card Edge Connectors is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
