## Abstracts

The global Metal Ceiling Radiant Panel market size is predicted to grow from US\$ 983 million in 2025 to US\$ 1197 million in 2032; it is expected to grow at a CAGR of 2.9% from 2026 to 2032.

In 2024, global sales of metal ceiling radiant panels reached \$7.21 million square meters, with an average selling price of \$138 per square meter. Metal ceiling radiant panels use infrared radiation to heat or cool large spaces. Installed in indoor ceilings, these panels are heating and cooling terminals that primarily utilize radiation, supplemented by convection. They typically feature heat exchange pipes embedded within or attached to the back of a metal panel. Hot or cold water flows through the panel surface, raising or lowering its temperature. Heat is then exchanged with the indoor air and objects through infrared radiation and some natural convection, achieving heating or cooling.

As a terminal HVAC product that combines energy saving and comfort, metal ceiling radiant panels are gradually gaining wider application driven by global carbon neutrality goals and green building policies. Their radiant cooling and heating methods can provide a quiet and uniform indoor environment, meeting the comfort and health needs of modern buildings. At the same time, integrated applications with intelligent control and fresh air systems further enhance energy-saving effects and applicable scenarios, leading to growing demand in office buildings, hospitals, educational institutions, rail transit stations, airports and other fields. However, the development of this product also faces challenges such as high initial investment costs, strict requirements for building structure adaptability, limited market awareness, raw material price fluctuations, and competition from alternative technologies such as VRV/VRF air conditioning and floor radiant heating. Overall, the market potential for metal ceiling radiant panels is huge, but

their future popularization still depends on the joint promotion of cost optimization, technology upgrades and market education.
