A metal chip removing gun, also known as a chip gun or chip breaker gun, is a handheld tool used in metalworking to remove chips or swarf from a workpiece. It is typically used in machining operations such as drilling, milling, or turning, where metal chips are produced as a byproduct of the cutting process.

The chip gun is designed to blow compressed air or coolant onto the workpiece, effectively removing the chips and preventing them from interfering with the cutting operation. It helps to maintain a clean work area, improve cutting efficiency, and prolong tool life by preventing chip buildup.

The gun usually consists of a handle with a trigger, a nozzle or tip for directing the airflow, and a connection for attaching to a compressed air or coolant supply. Some chip guns may also have adjustable airflow or different nozzle attachments to suit different machining applications.
