The global Metal Degreasing Services market size is predicted to grow from US\$ 1615 million in 2025 to US\$ 2667 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Metal degreasing services typically refer to the industrial process of professionally removing oil, grease, particulate matter, and other contaminants from the surface of metal parts using specialized chemical agents (such as solvent-based or water-based degreasers) or physical methods. Driven by both stringent environmental regulations and the demand for industrial precision, this market is exhibiting a clear evolutionary pattern. On the one hand, core industries such as automotive and aerospace are continuously increasing their requirements for the precision and consistency of cleaning, driving services towards high-end and customized solutions. On the other hand, increasingly stringent environmental regulations globally (such as restrictions on volatile organic compounds, VOCs) are accelerating the reshuffling of the market landscape, prompting service providers to shift from traditional solvent-based products to more environmentally friendly water-based and bio-based degreasing solutions. Therefore, technological integration and improved service efficiency have become key factors in measuring the core competitiveness of professional metal degreasing service providers.
