The global Metal Detector market size is predicted to grow from US\$ 761 million in 2025 to US\$ 1242 million in 2031; it is expected to grow at a CAGR of 8.5% from 2025 to 2031.

A metal detector is an electronic instrument which detects the presence of metal nearby. Metal detectors are useful for finding metal inclusions hidden within objects, or metal objects buried underground. They often consist of a handheld unit with a sensor probe which can be swept over the ground or other objects. If the sensor comes near a piece of metal this is indicated by a changing tone in earphones, or a needle moving on an indicator. Usually the device gives some indication of distance; the closer the metal is, the higher the tone in the earphone or the higher the needle goes. In this report, metal detector mainly refers to the underground metal detector, and the industrial metal detectors, security screening, pocket probe hand-held detectors are not included.

Global Metal Detector key players include Minelab(Codan), Garrett, Fisher Research Labs, White's Electronics, Bounty Hunter, etc. Global top five manufacturers hold a share about 55%. North America is the largest market, with a share about 55%, followed by Europe, with a share about 25 percent. In terms of product, Very Low Frequency is the largest segment, with a share about 70%. And in terms of application, the largest application is Leisure & Entertainment, followed by Security, etc.
