Metal enclosed switchgear is fairly self-explanatory. This is switchgear which is enclosed in a metal shell. There is metal on all sides of the internal components, with the exception of small ventilation and viewport openings. Further, the outer shell is grounded to improve the safety of the system overall. Within the scope of metal enclosed there are three subcategories, one of which is metal clad. The other two are low voltage power circuit breakers (IEEE C37.20.1) and metal enclosed interrupters (IEEE C37.20.3). Metal enclosed interrupters (MEIs) are essentially simplified construction versions of metal clad switchgear.
