## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Metal extractants are mainly seven common hydrogen ions or radicals such as phosphoric acid, salt, and benzene, which are replaced by some long-chain alkyl groups. When metals combine with these extractants, they turn into metal-organic compounds and dissolve in organic solvents. Due to the different binding abilities of various metals to these extractants, the order in which these extractants extract metals is different, thereby separating these metal ions. Transfer to another solvent.

The global Metal Extractant market size is projected to grow from US\$ 284 million in 2024 to US\$ 628 million in 2030; it is expected to grow at a CAGR of 14.1% from 2024 to 2030.
