Metal fireplaces are typically made from high-temperature-resistant metals such as cast iron, steel, or stainless steel. Cast iron fireplaces have excellent heat resistance and heat storage capabilities, allowing them to continue to radiate heat into the room after the fuel is extinguished. And steel fireplaces are popular for their lightweight and modern design style. Metal fireplaces come in a variety of designs, with both traditional and modern looks to meet the needs of different home styles. Many metal fireplaces are also equipped with glass doors, which allow people to admire the burning flames while increasing safety and preventing sparks from flying out. In terms of fuel selection, metal fireplaces usually use wood, coal, natural gas or electricity as fuel. Wood and coal are the most traditional options, but require storage and preparation. Natural gas fireplaces can be supplied through natural gas pipelines, making them more convenient to use. Electric fireplaces do not require actual fuel and use electricity to create flame effects and heat.

The global Metal Fireplace market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
