The metal powder injection molding mold is the basic part of the MIM process. The main structure of the metal injection molding mold (commonly known as MIM mold) is roughly the same as that of the traditional plastic mold, which consists of three major parts: the gating system, the forming parts and the structural parts. Among them, the gating system and the forming parts are the parts that are in direct contact with the feeding of the mold, and are the parts of the mold that require particularly high processing finish and precision.
