The global Metal Midframe for Mobile Phone market size is predicted to grow from US\$ 5478 million in 2025 to US\$ 7580 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Metal Midframe for Mobile Phone refers to smartphone structural frames mainly made of aluminum alloy, stainless steel, titanium alloy, magnesium alloy or titanium-aluminum composite materials. In 2025, the global Metal Midframe for Mobile Phone market is estimated at about 20 kilotons, with an average ex-factory price of USD 280 per kg. The Metal Midframe for Mobile Phone value chain includes upstream aluminum alloys, stainless steel, titanium alloys, magnesium alloys, titanium-aluminum composites, CNC tools, nano-molding materials, anodizing and PVD materials.

The Metal Midframe for Mobile Phone market is driven by premium design upgrades, thinner devices, AI-device thermal requirements, foldable-phone structural strength and brand differentiation. Compared with plastic frames, metal frames offer better strength, dimensional stability, heat dissipation and premium feel, supporting narrower bezels, larger camera modules and more complex internal layouts. However, higher machining cost, CNC time, antenna-break design complexity and surface-treatment yield challenges limit its full replacement of plastic frames in entry-level models.
