The global Metal Oxide Catalysts market size is predicted to grow from US\$ 3780 million in 2025 to US\$ 5908 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

In 2025, global output of power fuses reaches 920 million units, with an average selling price of USD 4.2 per unit, total production capacity of 1.08 billion units, and a gross margin of 29%.

A power fuse is a protective device that interrupts an electrical circuit by melting its fusible element under overcurrent conditions, preventing damage to equipment and wiring caused by overload or short circuits. It operates based on the thermal effect of the metal element, which melts when current exceeds the rated level, ensuring fast and reliable protection. Power fuses feature simple structure, low cost, rapid response, and strong current-limiting capability.

Catalysts with metal oxides as the main catalytically active components. The power fuse market is driven by power infrastructure upgrades, renewable energy expansion, and increasing electrification, showing steady growth. Demand for high-performance fuses is rising rapidly in photovoltaic, energy storage, electric vehicles, and industrial automation, particularly in high-voltage DC and high-current applications. Meanwhile, stricter safety standards are pushing products toward higher reliability, miniaturization, and intelligent features, with a relatively concentrated competitive landscape dominated by global leaders and regional manufacturers.
