The global Metal Payment Card market size is predicted to grow from US\$ 2279 million in 2025 to US\$ 7092 million in 2032; it is expected to grow at a CAGR of 17.9% from 2026 to 2032.

Metal Payment Card refers to a payment card made of metal materials (such as stainless steel, titanium alloy or aluminum alloy), which has a higher sense of weight and texture, and is more durable and luxurious than traditional plastic cards. This type of card is usually associated with high-end credit cards or membership card programs, aiming to provide users with a better payment experience while enhancing the cardholder's status.

In the banking industry, more and more financial institutions are issuing metal payment cards to attract high-income consumers, providing exclusive benefits and high-quality services. Compared with traditional plastic cards, metal cards not only have better physical strength, but also generate a higher sense of dignity and trust in users' minds. Financial institutions usually bundle them with premium credit card programs such as platinum cards and black cards, providing value-added services such as travel points, airport VIP lounge access, insurance benefits, etc. From a regional perspective, the market demand in North America, Europe and Asia Pacific is relatively large, especially in the field of high-end financial services and luxury goods, where metal payment cards have become an important means of brand differentiation. In addition, with the popularity of digital payments, metal cards have begun to combine modern payment technologies such as NFC and EMV chips to enhance their functionality. In the next few years, the metal payment card market is expected to continue to expand. As consumers' demand for high-end product experience increases, more industries and brands will use metal cards as a strategic tool to enhance brand image and customer loyalty.
