## Abstracts

The global Metal Permanent Magnet Material market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Metal permanent magnet materials are permanent magnet materials with iron and iron group elements (such as nickel, nickel, etc.) as the main components. Its main characteristics are high Curie temperature, high residual magnetic induction and high saturation magnetic induction.

The permanent magnet material market has shown a continuous growth trend in recent years, mainly driven by demand in the fields of electronics, electricity, automobiles and renewable energy. Permanent magnet materials, especially neodymium iron boron magnets, are widely used in the manufacture of motors, generators, sensors and various electronic devices, playing a key role in improving energy efficiency, reducing device size and improving performance. With the rapid development of the electric vehicle and renewable energy industries, the demand for permanent magnet materials in these applications continues to increase. However, the permanent magnet materials market also faces some challenges, including dependence on rare earth metals (such as neodymium, praseodymium, etc.), which are mainly used to manufacture high-performance permanent magnet materials. Supply instability, price fluctuations and environmental impacts of rare earth metals have sparked research into alternative materials and recycling technologies. In addition, the uncertainty of the global trade environment and geopolitical factors may also have a certain impact on the permanent magnet materials market.
