A plate heat exchanger is a type of heat exchanger that uses metal plates to transfer heat between two fluids. This has a major advantage over a conventional heat exchanger in that the fluids are exposed to a much larger surface area because the fluids are spread out over the plates. This facilitates the transfer of heat, and greatly increases the speed of the temperature change.

The Asia Pacific is expected to be the fastest-growing market over the forecast period owing to extensive usage in the HVAC, Chemical field, etc.
