## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

The metal powder flow tester is an instrument used to evaluate the flow properties of metal powders. It usually uses methods such as the flow cone method (flow funnel method) or the flow box method (Hope sliding funnel method) to measure the flow properties of metal powder under specific conditions. These tests typically involve passing a metal powder through a specific orifice or channel and then measuring the time or velocity of its passage to evaluate its flow properties. The flow properties of metal powder are of great significance to processes such as powder metallurgy, metal injection molding, and 3D printing, so metal powder flow testers are widely used in these fields.

The global Metal Powder Flow Tester market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
