The global Metal Powder Water Atomization Equipment market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Metal powder water atomization equipment is a specialized industrial machinery used in the production of metal powders through a process called water atomization. Water atomization is a powder manufacturing technique that involves the conversion of molten metal into tiny droplets by spraying it with high-pressure water. These droplets rapidly cool and solidify, resulting in the formation of fine metal powder particles. This process is widely employed in the production of metal powders for various industrial applications, including additive manufacturing, powder metallurgy, and thermal spray coatings.

Ongoing research and development in nozzle design to improve the atomization process by creating finer and more uniform droplets. This contributes to the production of metal powders with enhanced flowability and sphericity.
