Metal protection additives are chemical compounds or formulations that are used to protect metal surfaces from corrosion and degradation. These additives are typically mixed with coatings, paints, lubricants, or other products to enhance their protective properties when applied to metal substrates. The primary purpose of metal protection additives is to extend the lifespan and maintain the integrity of metal materials, preventing them from rusting, oxidizing, or corroding due to exposure to environmental factors such as moisture, chemicals, or UV radiation.

There has been a growing emphasis on environmentally friendly and sustainable metal protection additives. Manufacturers and consumers alike have been seeking products that are not only effective at preventing corrosion but also have minimal environmental impact.
