The global Metal Recovery System market size is predicted to grow from US\$ 1646 million in 2025 to US\$ 2230 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

A Metal Recovery System is an engineered process or set of technologies designed to extract, separate, and reclaim valuable metals from industrial waste streams, effluents, and by-products. These systems often combine physical, chemical, and sometimes biological methods to recover metals such as copper, nickel, cobalt, lithium, and precious metals with high efficiency. The recovered metals can then be reused in manufacturing, reducing raw material costs and environmental impact. In 2025, global Metal Recovery System production reached approximately 688 k units, with an average global market price of around 2445 USD/unit. The production capacity for Metal Recovery System in 2025 was approximately 1000 k units. The typical gross profit margin for Metal Recovery System between 20% and 40%.

The Metal Recovery System market refers to the global industry segment focused on the development, manufacturing, and deployment of systems that recover metals from wastes and process streams. Growth in this market is driven by increasing demand for sustainable resource utilization, stringent environmental regulations, and rising metal prices. Key applications include mining, electroplating, battery recycling, wastewater treatment, and circular economy initiatives. Market players range from specialized technology providers to integrated industrial solution companies.
