Metal shearing services are industrial processes that cut sheets or plates of metal into specific shapes and sizes. As a subset of stamping, shearing shapes or divides metal into parts through operations such as blanking and piercing. Unique among metalworking methods, shearing exclusively focuses on cutting without removing material. Shearing employs a die to exert shear force on metal, precisely cutting it into the required shape. This process capitalizes on the force between the press and the metal, essential for achieving the desired configuration.
