Metal Shears & Nibblers are a type of industrial tool or equipment used to cut and form metal sheets, and are widely used in sheet metal processing, manufacturing, automotive repair and construction. Among them, metal shears quickly cut metal sheets through a linear shearing action, which is suitable for long straight edge cutting. Common types include manual shears, electric shears and hydraulic shears; while nibblers use high-speed reciprocating punches to gradually 'bite' out complex curves or round holes, which are particularly suitable for processing special-shaped or fine graphics. Compared with the two, nibblers have less deformation and greater flexibility, while metal shears are faster and suitable for large-area cutting. This type of equipment is a key tool for achieving efficient, precise and low-deformation cutting in the metal processing field.

United States market for Metal Shears & Nibblers is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
