The global Metal Shot Peening Shot market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Metal shot peening shot is a special metal particle material, whose diameter is usually within a certain range (such as 0.2-2.5mm), which is used to be sprayed at high speed onto the surface of metal workpieces through a shot peening machine or similar equipment. During the spraying process, these shot particles violently collide and cut with the metal surface, thereby changing the physical and chemical properties of the metal surface to achieve the purpose of strengthening, cleaning, beautifying or repairing. Metal shot peening shot is widely used in many fields such as automobiles, aerospace, ships, casting, and machinery manufacturing. In automobile manufacturing, it is often used for surface strengthening treatment of engine cylinder blocks, crankshafts and other parts; in the aerospace field, it is used for cleaning and strengthening of aircraft parts to ensure that they can withstand extreme environmental conditions during use.

United States market for Metal Shot Peening Shot is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
