The global Metal Spinning Lathes market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The growing trend of industrial automation and precision manufacturing is one of the major factors driving the growth of the lathe market as lathes increase product consistency and improve the value chain. Additionally, due to their speed, precision, and low operating costs, lathes are gaining popularity in the manufacture of a variety of medical implants and devices. Apart from this, rising demand for energy-efficient vehicles with advanced safety features is promoting the adoption of lathes to form different parts of the vehicle. Some foreign companies are setting up manufacturing plants in emerging countries such as China and India due to technological expertise, cheap labor and low cost of raw materials. This creates lucrative opportunities for manufacturers to expand their consumer base and maintain a competitive edge. Furthermore, the emergence of the fourth industrial revolution (Industry 4.0) is encouraging the integration of the Internet of Things (IoT) in lathes, which is expected to drive the market.

Metal Spinning Machines report published by QYResearch reveals that COVID-19 and Russia-Ukraine War impacted the market dually in 2022. Global Metal Spinning Machines market is projected to reach US\$ 99 million in 2029, increasing from US\$ 76 million in 2022, with the CAGR of 3.8% during the period of 2023 to 2029. Demand from Automotive and General Industrial are the major drivers for the industry.
