The metal spiral wound gasket with ring is a gasket used to seal and fill gaps. It consists of a metal belt and a ring structure. The gasket creates a seal by wrapping a metal band around a ring structure and fixing it by wrapping it around the ring.

Metal spiral wound gaskets with rings are made of metal strips. The ring structure is usually made of non-metallic materials and is wrapped around the ring structure through a specific winding method. It has good sealing performance and is widely used in various fields. The use of metal spiral wound gaskets with rings can improve the safety and reliability of the equipment.
