A metal stair nosing is a metal strip that fits between the nosing of a stair step and the stair tread. It is usually made of aluminum alloy, stainless steel, brass and other metals, with high hardness and wear resistance. The main function of the metal stair buckle is to protect the front edge of the stair tread, prevent wear and damage when stepping on it, and at the same time increase the aesthetics of the stair. In addition, the metal stair profile also has an anti-slip function, which can reduce the risk of slipping when walking on the stairs. Metal stair rails are usually attached to stairs by means of fixing bolts or glue.
