The global Metal Straightener market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Metal straightener is a piece of equipment used to correct deformations in metal components. These deformations can include bends, twists, warps, or other imperfections that may occur during manufacturing processes or due to external factors such as handling or transportation. A metal straightener typically consists of rollers, presses, or other mechanisms designed to apply controlled force to the metal workpiece. The workpiece is fed through the straightener, and the rollers or presses gradually apply pressure to straighten the metal and remove any deformations. The straightening process may be manual, semi-automatic, or fully automated, depending on the complexity of the components and the level of precision required.

United States market for Metal Straightener is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
