Metal Strip Guiding Systems are automated control systems designed to ensure precise alignment of metal strips during manufacturing or processing. These systems use sensors to monitor the position of the strip edges or centerline in real-time and transmit deviation data to actuators, such as servo motors or hydraulic cylinders, which adjust guide rollers or correction mechanisms accordingly. Widely used in industries like steel rolling, coating, and slitting, these systems help maintain accurate strip positioning, improve product quality, reduce material waste, and enhance production efficiency.
