The global Metal Suture Anchor market size is predicted to grow from US$ 423 million in 2025 to US$ 601 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Metal suture anchors are implants used for soft tissue-to-bone fixation, typically made of titanium alloy or stainless steel and pre-loaded with high-strength sutures. By implanting the anchor into the bone and using the sutures to pull and fix the soft tissue, stable fixation can be achieved for soft tissue reconstruction of joints, such as rotator cuff repair and ankle ligament repair. These products are characterized by high strength, strong pull-out resistance, and excellent fatigue resistance, and are widely used in sports medicine and arthroscopic surgery. The upstream of the industry chain includes medical titanium alloy rods, high-performance fiber sutures (such as DSM Dyneema®), precision machining equipment, and surface treatment service providers; the midstream consists of professional orthopedic companies with Class III medical device registration certificates, such as Smith & Nephew, Arthrex, Johnson & Johnson DePuy Mitek, and Daibo Medical, which need to master microstructure processing, suture-metal connection strength verification, and sterilization packaging technology; the downstream mainly targets sports medicine departments, orthopedic specialty hospitals, and high-end private medical institutions, entering clinical practice through distributors or direct sales. In 2024, the global production of metal strip anchors was approximately 2,469,000 pieces, with an average price of US$166 per piece. Major manufacturers had gross margins ranging from 48% to 65%, with a single production line capacity of 123,000 pieces per year.

United States market for Metal Suture Anchor is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
