The metal toothed combination gasket is a gasket used to seal and fill gaps. It consists of multiple metal toothed rings. Each metal toothed ring has one or more tangential protruding toothed structures that can be nested together to form a complete sealing ring.

Metal toothed combination gaskets have the following characteristics: multi-layer design, high pressure performance, high temperature performance, and good sealing performance. They are usually used to seal high pressure, high temperature, corrosive media, etc., with good sealing performance and reliability. The use of metal toothed combination gaskets can improve the safety and reliability of the equipment and reduce maintenance costs.
