Metal trauma implants are medical devices which are used for temporarily or permanently restoration of the physiological functioning of skeletal structures and joints. The surgeons picks the implant by assessing several parameters such as size, weight, and type of material most appropriate to the patients. Based on the surgery there are several trauma implant products such as plates, screws, pins, and rods for fixation of the fractured bones.

According to our research, the global market for medical devices is estimated at US$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets.
