The report requires updating with new data and is sent in 48 hours after order is placed.

The global Metal Wedding Bands market size is projected to grow from US\$ 66030 million in 2022 to US\$ 99400 million in 2029; it is expected to grow at a CAGR of 6.0% from 2023 to 2029.

The growth of the wedding band market is fueled by advancements in technology, the use of modern equipment, design optimization through computer-aided design (CAD), celebrity endorsements, increased demand for customized wedding bands, investment in better raw material quality, and design and features of wedding bands. Moreover, increasing buyers' willingness to pay for a premium wedding band and the availability of a variety of styles and designs for men's wedding bands are expected to drive the market. Due to the increased choice of style and design offerings, the demand for wedding bands has gained traction in the past few years.

Wedding bands are an essential part of wedding culture in many countries. Previously, men usually preferred simple designs of wedding bands. The historical significance of gold made it arguably the most popular metal for men's wedding bands. But with innovation and new fashion trends, the millennial generation is inclining toward wedding bands made from other precious metals. Considering consumer preferences, jewelry manufacturers are making bands from a wide range of precious metals such as white gold, silver, rose gold, platinum, titanium, and other precious and semi-precious metals.
