The metal wire forming machine belongs to a kind of machine for processing wire. Its structure is composed of a smoothing mechanism, a preforming mechanism and a forming mechanism connected in sequence on the base. The preforming mechanism extrudes it into a round or oblate shape, and finally the forming mechanism rolls it into the required standard wire and makes it into a disc. Compared with the existing technology, the utility model wire forming machine has the characteristics of reasonable design, simple structure and convenient use. It uses cold rolling process to produce wire, which greatly reduces the complexity of the equipment and is very convenient to operate.
