The global Metalens Design Software market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Metalens design software is a computer program that is used to design and simulate the performance of metalenses. Metalenses are a type of lens that use nanostructures to manipulate light at the subwavelength scale, allowing for the control of properties such as focal length, wavefront shaping, and polarization.

Metalens design software typically includes tools for designing the nanostructures that make up the metalens, optimizing their shape and arrangement to achieve desired optical properties. It may also include simulation capabilities to predict the performance of the metalens in different scenarios, such as different wavelengths or incident angles of light.

The software may use various algorithms and computational methods to model the behavior of light interacting with the nanostructures, such as finite-difference time-domain (FDTD) or rigorous coupled-wave analysis (RCWA). It may also provide visualization tools to help users understand and analyze the performance of the metalens.

United States market for Metalens Design Software is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
