The global Metalens Optical Inspection System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The metalens optical inspection system is a dedicated optical inspection system for planar optical components such as metalenses, metasurfaces, and microlens arrays. The system integrates a variety of advanced technologies such as microscopic imaging technology, off-axis digital holography technology, and far-field imaging technology. It can realize in-situ detection of light field distribution, phase distribution, and far-field distribution, and deeply reveal the metastructure surface and metastructure. The inherent physical properties of plane optical components such as lenses and microlens arrays provide powerful detection tools for verifying the accuracy of the design and optimizing the preparation and processing technology.
