The global Metalized Oriented Polypropylene (OPP) Films market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Metalized Oriented Polypropylene (OPP) Film is a specially treated polypropylene film with good optical and mechanical properties. The film is oriented through a stretching process that aligns the polypropylene molecular chains in a specific direction, which improves its strength and transparency. Subsequently, the film surface is metallized, usually by vacuum evaporation or spraying of a metal layer, giving it excellent reflective and shielding properties. Metallized oriented polypropylene film is widely used in packaging, electronics, automotive and construction, and is favored for its lightness, durability and excellent moisture resistance.
