Metalized PVC film is a polymer-coated type of PVC film coated with a thin layer of metal, especially aluminum. As a thermoplastic polymer material, PVC is coated as a film by the steaming process. The film offers barrier properties against the light, oxygen, and moisture with added benefits such as reduced weight and cost. The coating also decreases the permeability of the film to light, water, and oxygen. As the film has excellent metallic shine and gloss and stunning visual effects, it is used for a wide range of displays, technical plates, labels, and symbols, often as an alternative to expensive traditional materials. Metalized PVC film has its applications in decoration, gifting, and foodstuff wrapping purposes.
