The report requires updating with new data and is sent in 48 hours after order is placed.

Two-dimensional optoelectronic materials are composed of a single layer or a few layers of atoms or molecules. The layers are connected by strong covalent bonds or ionic bonds, and the layers are combined by van der Waals forces with weaker forces. Metallenes is one of two-dimensional optoelectronic materials.

According to this study, the global Metallenes market size will reach US\$ million by 2029.

Metallenes have good electrical conductivity, abundant defects and coordinated unsaturated sites, extremely high atom utilization, special quantum size effects and stress effects, etc., giving these materials unique and excellent electrocatalytic performance. It can be used as a kind of promising new electrocatalytic material.
