Deoxidizers, known as oxygen absorbers, are typically used to decrease or eliminate oxygen from boiler system packages and boiler feedwater. These help avoid deteriorative reactions caused by oxygen availability, which improve the working capabilities of different products and processes. Deoxidizers used particularly for packaging purposes are classified as active packaging which is commonly used in the food and beverage and pharmaceutical industries, and it responds to changes in the surrounding environment. The product reduces the harmful effects of oxygen while prolonging the shelf life of consumer purchasing. They are used in boilers with deaerators to eliminate residual oxygen content and prevent corrosion. They are also

utilized in the production of oil and gas, the preservation of artworks, and the solderability of electronic devices, among other things.
