The global Metallic Material Agglomerator market size is predicted to grow from US\$ 411 million in 2025 to US\$ 601 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

In 2025, global Metallic Material Agglomerator production reached approximately 4,421 units, with an average global market price of around US\$95,000 per unit.

The gross profit margin of major companies in the industry is between 28%-45%.

In 2025, the global production capacity of Metallic Material Agglomerator was approximately 5,895 units.

Metallic Material Agglomerator is industrial equipment used to compact, granulate, briquette, or aggregate metal powders, chips, fines, dust, and recyclable metallic materials into denser and more manageable forms. It supports material recycling, powder metallurgy preparation, metal recovery, waste reduction, storage efficiency, and downstream smelting or processing.

The industrial chain of Metallic Material Agglomerator covers upstream components such as steel frames, hydraulic systems, rollers, dies, motors, reducers, control cabinets, sensors, wear-resistant parts, and dust collection units. The midstream consists of equipment design, machining, hydraulic integration, forming mechanism assembly, control programming, testing, and commissioning. Downstream applications mainly include metal recycling plants, powder metallurgy, foundries, steel mills, battery material processing, mining, and industrial waste treatment.

Metallurgical processing, industrial wastewater treatment and oil/water separation scenarios fuel the demand for metallic material agglomerators. It efficiently gathers fine metal particles to improve resource recovery and sewage purification efficiency. Corrosion-resistant alloy structure extends service life in harsh industrial environments.
