Metallurgical analyzer is a scientific instrument used to analyze the composition and property of metal materials. It is widely used in various industries, including metal production, manufacturing and quality control. Metallurgical analyzers use a variety of technologies to analyze metals and metal alloys, including optical emission spectroscopy (OES), X-ray fluorescence (XRF) and laser-induced breakdown spectroscopy (LIBS). These techniques involve the excitation of metal samples, which results in the emission of characteristic light or radiation. The resulting spectrum is then analyzed to determine the composition of the metal and its properties, such as strength,

corrosion resistance and hardness.
