The global Metallurgical Composite Pipe market size is predicted to grow from US$ 1206 million in 2025 to US$ 1743 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

Metallurgical composite pipes form atomic diffusion between the interface of the substrate and the cladding through hot working forming methods to achieve metallurgical bonding. They have good interface bonding strength and can be widely used in aerospace, chemical industry, oil and gas, etc.

Composite pipe can be divided into metallurgical composite and mechanical composite. Mechanical composite pipes are not suitable for expansion and bending parts such as risers due to their low interface bonding strength, and they need to undergo additional inspection and testing. They also have higher requirements for on-site welding operations. The advantage is that the price is generally only 50-70% of the metallurgical composite pipe, but after 5-6 years of use, the economic efficiency is not as good as that of metallurgical composite pipes.

With the rapid development of the industrial field, especially the increasing demand for high-performance pipes in the oil field, chemical industry, power industry and other industries, the market demand for metallurgical composite pipes continues to grow due to their high carbon content, impact resistance, low thermal expansion rate, pressure resistance, high temperature resistance and other characteristics.

With the continuous advancement of technology and the acceleration of industrial upgrading, the metallurgical composite pipe market will pay more attention to technological innovation and product quality improvement. In the future, enterprises

need to increase R&D investment and continuously launch new products and new processes to meet the market demand for high-performance pipes.

With the enhancement of global environmental awareness and the implementation of energy conservation and emission reduction policies, the market demand for metallurgical composite pipes as an environmentally friendly pipe material will further increase. Environmental protection policies will affect market development and need to be closely monitored.
