Metallurgical lifting fixture is a special tool specially designed for lifting and positioning heavy objects in the metallurgical industry. It is usually made of high-strength alloy materials to ensure good durability and stability in extreme working environments. Metallurgical lifting fixtures have various structures, including clamp type, hook type, magnetic suction type, etc., to adapt to heavy objects of different shapes and sizes. These clamps achieve clamping and releasing actions through precise mechanical transmission or hydraulic systems, and can safely and reliably complete lifting tasks under harsh conditions such as high temperatures and molten metal splashing. Metallurgical lifting fixtures have a wide range of applications, covering many fields such as steel smelting, non-ferrous metal processing, casting and forging, etc. They are indispensable and important equipment in the metallurgical industry.
