The global Metamizole API market size is predicted to grow from US\$ 170 million in 2025 to US\$ 155 million in 2032; it is expected to grow at a CAGR of -1.5% from 2026 to 2032.

Metamizole API (Analgin API) is a pure compound that can be formulated into various dosage forms, such as injections (IV/IM), oral tablets, syrups, or rectal suppositories. It is primarily used in medical settings requiring rapid relief of severe pain or fever.

Metamizole is a non-opioid analgesic and antipyretic used to treat severe pain and fever. In 2025, global Metamizole API production reached approximately 19.31 K MT. Global production capacity in 2025 is approximately 26 K MT. The Metamizole API industrial chain is upstreamed by basic petrochemicals and inorganic reagents (e.g., aromatic feedstocks/solvents, nitrite systems, bisulfite-related reagents, and C1 chemicals like formaldehyde/methanol). Downstream, formulators manufacture tablets and injections for hospital and retail markets in countries where metamizole remains approved.

The metamizole API market is expected to maintain a certain level of demand in the coming years, supported by continued clinical demand in regions where it is not explicitly prohibited (such as Latin America, parts of Europe, and parts of Asia).
