Metasilicates are a group of chemical compounds that contain the silicate ion ( $\text{SiO}_3^{2-}$ ) in their structure. These compounds are derived from orthosilicates (containing ( $\text{SiO}_4^{4-}$ ) tetrahedra) through condensation reactions, where water molecules are eliminated to form chains or rings of silicate units. Metasilicates are characterized by their diverse structures and properties, and they have various industrial, geological, and technological applications.

The global Metasilicates market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
