A spine tumor is an abnormal growth of tissue found in and/or around the spinal column and/or spinal cord. More than 95% of all metastatic spinal tumors are found outside the dura (extradural) and within the vertebral body, and in more than half of the cases they are found on multiple levels of the spine.

It is common for cancer cells to metastasize, or spread, to bones. Most commonly, cancer cells spread to the lung, the liver, and the bones, respectively, and most bone metastases occur in the spine. The most common way for cancer cells to reach the spine is via the blood stream, after which they enter the bone marrow and begin to multiply.
